Aluminium is the second- most widely consumed metal today and Jindal Aluminium, in order to push the application of aluminium in various sectors, is investing in R&D for newer applications of the metal, said Pragun Khaitan, Vice Chairman and Managing Director, Jindal Aluminium. While there are approximately 3,000 technological applications of aluminium globally across various industries, India has explored only about 300 so far and despite having sufficient production capacity, the country remains one of the largest importers of aluminium in the world. For India's potential in the sector to grow, the country "should implement legislative measures that incentivise the development of the downstream aluminium industry". "Also, custom duty levies need some changes which are affecting our sector. We can ensure that we have a steady supply of raw materials at fair rates by revising the enforcement of customs duties," said Pragun Khaitan.
